Assumptions:

1. Author can write multiple papers
2. A paper can have multiple authors
3. Each paper has a contact author. An author can be the contact for multiple papers. If the author is part of a group of authors for a certain paper they don't have to be the contact for the paper.
4. A paper generates only 2-4 reviews
5. Each review is written by one reviewer.
6. A reviewer can write multiple reviews but it has to be for different papers — A reviewer can not write multiple reviews for the same paper.
7. Each reviewer has interest for a specific topic of paper that they read and review.
